Dear Mark Kaltman,

Thank you for your great product and service. As Senior Audio/Video Technician for the City of San Antonio's Alamodome we have been successful in eliminating our Radio Frequency troubles since we began using your analyzer. It is compact, light, easy to use and very affordable.

I began working as the Sr. Audio Engineer in the dome last year. The Alamodome has always been a hostile RF environment. We continually struggled to find "white spaces." Even the scan function on receivers was not a reliable method of tuning our RF devices.

Since we purchased your analyzer, tuning and monitoring RF is simple. When we experienced a problem with our unit you were prompt in replacing it. I especially appreciate the fact I talked to a real person. That person turned out to be you. Thank you for a great product. I would recommend this product for anyone who uses wireless mics or wireless communications.

Sincerely yours,

Michael Aldridge
