

Another Award for the Invisible Waves RF Analyzer!

November 2009 Atlanta, Georgia- Kaltman Creations LLC has done it once more! Known for providing RF solutions for any and all uses, the company has won yet another award for the indispensable Invisible Waves RF Analyzer. This past weekend, at the LDI Trade Show in Orlando, Florida, the Invisible Waves product won the “LDI Best Debuting Product” in the category of “Sound.” Though the analyzer’s use is not specific to the Pro-Audio field, it has found its way onto tours for bands such as U2 and the Teagan & Sara Band, as well as the Sarah Brightman tour and the Pet Shop Boys. Due to its irreplaceable ability to locate open space in the RF spectrum, as well as any potential interference with things such as wireless mics and in-ear monitors, the Invisible Waves continues to prove its importance in the ever-changing RF environment.

In addition to the winning of the LDI award, the Invisible Waves was also nominated for the prestigious “Innovative Technology” Parnelli Award, and Kaltman Creations expresses a sincerely appreciation for those who voted for the product.
