

Kaltman Creations' Award-Winning Invisible Waves Product

Kaltman Creations continues to reap the rewards of the well-received Invisible Waves line of RF Spectrum Analyzers. One particular product caught the eye of Mark Frink, Associate Editor of Live Sound International journal, at the InfoComm 2008 trade show. His July "InfoComm Insider" edition lists the Kaltman Creations IW1800 as the pick of InfoComm 2008.

"Frink's Favorite is appropriate to the changing RF environment. Mark Kaltman follows the success of his affordable Spectran handheld scanners with the new Invisible Waves IW-1800 scanning spectrum analyzer, a PC-controlled RF scanner with advanced software that inter-leaves frequency scanning for faster response. Intuitive bandwidth and threshold controls simplify investigation of RF 'white spaces.' Transitions to new 700MHz services and elimination of analog TV broadcasts next year magnify this tool's value." (Frink, Mark. "Las Vegas Brings the Heat." Live Sound International July 2008: 30-34.)

Kaltman Creations is honored to receive this prestigious pick, and is glad to have the recognition of this unique RF necessity. The company hopes that the success of the Invisible Waves product continues to grow, as they come closer to meeting all RF needs.
